

Our Service

SOFTWARE LOCALIZATION

Software localization is more than translation. It is an engineering process that involves software compilation, software testing, desktop publishing, and project management. Thus, the best places to seek localization service are localization companies which not only translate, but also master technology, tools, and knowledge to accomplish the designated localization work.

We treat software localization as an engineering system, and consider various factors such as quality, cost, time, and technology, which are key to the success of a localization project.

PROFESSIONAL TRANSLATION

A good translation requires not only proficiency in the source language and target language, but also a good understanding of the domain knowledge. A good translation must be complete, grammatically accurate, stylistically appropriate, and terminologically consistent.

We provide translation service for both business and personal purposes in a large variety of disciplines, such as computer hardware/software, business, engineering, education, travel, medical, and so on.

About us

ScienceVantage specializes in English and Chinese (Simplified and Traditional) professional translation and software localization. From its inception, ScienceVantage has developed genuine initiative, innovation, and discipline. We have played active roles in project management, software engineering, and translation in a number of projects for clients such as Microsoft, HP, Oracle, SAP, and McAfee.

Our management team and staff members have extensive experience in large-scale localization and translation projects. Each member of our team holds an advanced degree in business, technology, or language/literature from prestigious universities in the US and China.

We have expertise, capability, and experience in terms of working in the following platforms and tools:

- ✧ Windows (9x, Me, NT, 2000, XP), UNIX and Linux
- ✧ Trados, Star Transit, Catalyst, Microsoft LocStudio
- ✧ Programming Languages and Web technologies – XML, Jscript, HTML, ASP, VB, Perl, CGI, Java, C++
- ✧ DTP formats – PDF, Word, FrameMaker, Photoshop, Illustrator, Quark

What makes us unique

We can make a difference by providing high quality work at low cost:

Quality: To ensure high quality and consistency, we apply company-wide standards and quality control mechanisms. Members of our US-based quality control team have been working and living in the US for years. We are truly bilingual and bicultural.

Cost: Our China-based team is responsible for the majority of translation and software engineering work. Thus, we are able to benefit from the low fixed and variable costs in China, without sacrificing quality.

Working with us is always an enjoyable experience!

Global vision

ScienceVantage is a young, but fast growing business with global vision. We look forward to building partnerships with new clients around the world and providing first class localization and translation services. With our rapidly expanding global network, ScienceVantage will continue to work closely and diligently with our clients to bring advanced service and technology to the 21st century. We look forward to having you in our global network and serving you in the near future.
